

SAP S/4HANA; SHELL'S JOURNEY

ONLINE VIA MS TEAMS

15:30 - 17:00

Knowledge sharing on the (technical) implementation of SAP S/4HANA.

An ERP-system is the beating heart of the organization for most manufacturing companies, to support all processes within the company. To replace an ERP, is therefore no mean feat. Within Shell, there is not just one ERP, but there are up to 30 different ERP systems, most in SAP ECC 6 and some already in SAP S/4HANA. With a growing wish to drive more value by simplification, and for enterprise alignment of the different systems, Shell has mapped out its 10-year move to SAP S/4HANA.

Moving to SAP S/4HANA is a journey, where most organizations need to understand their reasons for moving, before they can build their business case for the move. Within Shell, they are looking at a multitenant scenario, to cover different aspects of the business, driven from an aligned data design. Each deployment is approached as a greenfield deployment, with the end goal of being 100% on the cloud. But how do you start a transformation project like this? And what are the challenges and solutions that Shell has faced so far?

During this session, Arthur de Niet, IT Solution Architect, and Johan van der Meijden, Lead Architect S/4 at Shell, will share the journey of Shell with SAP S/4HANA. Subjects that will be covered during this session are the chosen change approach, design choices made, scope and lessons learned. Are you curious how Shell approaches this transformation? Please apply for this session!

TARGET AUDIENCE

IT Architects, Transformation Leads, Senior Management, Projectmanagers, Program Managers

PROGRAM

- 15:30 – 15:45 Welcome and introduction
- 15:45 – 16:25 Presentation SAP S/4HANA journey Shell
- 16:25 – 16:55 Room for questions – interactive discussion
- 16:55 – 17:00 Wrap-up and closing
